# Software Engineer – Full-Stack (London HQ)

We are on the hunt for a talented, creative, and architecturally minded software engineer to work with our engineering team, which currently comprises x5 Software engineers, x2 Front-end engineers and our DevOps engineer. The team is supported by our UX/UI and QA specialists, Technical lead, Product Lead, Product Owner, and our intrepid data analytics team.

You'll be delivering features across our Azure-based SaaS platform built on the Microsoft .NET 6 and Angular stack. The focus for this role is both front and back-end, so you will be comfortable working on the .NET 6 back-end as well as other web UI technologies.

Our stack: C# .NET 6, SQL, Angular, Azure

This is an incredibly exciting time to be joining Acumen's product delivery team, with an opportunity to influence the team culture and platform roadmap at a critical point in our growth towards becoming a cloud-first SaaS provider, in an environment filled with lovely people and a passion for excellent customer experiences!

## You will be

- Comfortable working with an established agile process to scope, define and do your part in delivering great features and infrastructure
- Passionate about excellent technology delivery, from best practice to contributing to the technical roadmap
- Keen to understand our products, our market, and our clients
- Technically proficient, with a keen eye for UI/UX detail
- An exceptional problem solver with great communication skills
- Able to spot opportunities to optimise and improve our software, both in terms of technology and UX
- Confident translating designs into the code that will produce visual elements of the application
- Able to work with the UI/UX designer to bridge the gap between graphic design and technical implementation, taking an active role in defining how the application looks, as well as how it works.
- Able to demonstrate hands-on experience in using current trends and best practices in architecture, including performance optimization, accessibility, and usability

## Required Skills

We're a Microsoft.NET / Angular shop, with a platform including:

- Our current, modern C# .NET6 application
- Angular front-end systems and other JavaScript frameworks
- SQL Server for data storage
- Embedded Analytics using Power BI and other Reporting tools

Ideally, you will have hands-on experience with all of the above. PowerBI knowledge would be useful but not essential. An ability to communicate and collaborate clearly to refine solution designs will be essential.

You will also have experience working with:

- Git for source control
- Microsoft Azure cloud systems, including technologies like App services and/or Terraform
- Octopus Deploy or similar CI/CD toolsets

If you've used similar systems but not these, that's okay – we're looking for familiarity with the concepts and an ability to absorb new knowledge quickly and get yourself up to speed with whatever the situation needs.

## Benefits

This role offers a competitive salary of up to £60000 per annum depending on skills and experience. We offer flexible working; so you get to choose how and where you would work best, while keeping in touch through quarterly away days, monthly team events and meet ups. We are committed to building the capabilities of our teams so invest significantly in this, offering opportunities for both personal and further professional development. For further information about benefits, please visit our [Website](#).

## About Acumen

Acumen deliver lasting change through smart revenue management for consumer brands. We do this through the deployment of our award-winning applications and delivery of our game changing consulting services.

## Apply

To apply, please send us your CV to [jobs@acumenci.com](mailto:jobs@acumenci.com)

Acumen is an equal opportunity employer that is fully committed to treating all of its employees and job applicants equally. We value and respect individuality and all the diverse ways of being; and do not discriminate on the basis of race, religion, colour, national origin, gender, sexual orientation, age, marital status, veteran status or disability status.

If you have a disability, health condition and/or are neurodiverse and may benefit from some adjustments and support then just ask; we don't want our hiring process to be a barrier for you. We will work with you to support your needs and identify reasonable adjustments that will help you to be at your best and have the best experience. We won't require you to provide proof to support your request; we trust you.
